**Intended Use**

The *Matriks Biotek* Antibody to Adalimumab (Humira®) Enzyme-Linked-Immuno-Sorbent-Assay (ELISA) Kit is intended for the qualitative determination of antibodies to Adalimumab (Humira®) in serum and plasma. It is for professional use only.

**Summary and Explanation**

Adalimumab (Humira®) is a tumor necrosis factor (TNF) blocker indicated for treatment of Rheumatoid Arthritis, Juvenile Idiopathic Arthritis, Psoriatic Arthritis, Ankylosing Spondylitis, Crohn’s Disease, Plaque Psoriasis.

According to the manufacturer’s product insert, the use of Adalimumab (Humira®) was associated to the development of anti-adalimumab antibodies, even some were reported to be neutralizing, in various percentages of patients during therapy with the drug Humira®. This might lead to severe complications. The *Matriks Biotek* Antibody to Adalimumab ELISA Kit can be efficiently used for monitoring anti-adalimumab etanercept antibodies during therapy and offers the clinician a tool for decision on possible preventive measures such as possible addition of immunosuppressive drug to reduce anti-adalimumab antibodies.

With this *Matriks Biotek* ELISA test, antibodies to adalimumab can be detected in patients receiving Humira®.

**Test Principle**

The *Matriks Biotek* Antibody to Adalimumab (Humira®) ELISA is a sandwich assay for the determination of antibodies against adalimumab in serum and plasma samples. During the first incubation period, the drug adalimumab coated on the wall of the microtiter wells captures the antibodies to adalimumab in patient serum and plasma samples. After washing away the unbound components from samples, a Peroxidase-labelled conjugate is added to each well and then incubated. After a second washing step, the bound enzymatic activity is detected by addition of tetramethylbenzidine (TMB) chromogen-substrate. Finally, the reaction is terminated with an acidic stop solution. The intensity of the reaction color is directly proportional to the concentration of antibodies to Adalimumab in sample.
Warnings and Precautions

1. For professional use only.

2. Before starting the assay, read the instructions completely and carefully. Use the valid version of the package insert provided with the kit. Be sure that everything is understood. For further information (clinical background, test performance, automation protocols, alternative applications, literature, etc.) please refer to the local distributor.

3. In case of severe damage of the kit package please contact Matriksbiotek or your supplier in written form, latest one week after receiving the kit. Do not use damaged components in test runs, but keep safe for complaint related issues.

4. Obey lot number and expiry date. Do not mix reagents of different lots. Do not use expired reagents.

5. Follow good laboratory practice and safety guidelines. Wear lab coats, disposable latex gloves and protective glasses where necessary.

6. Reagents of this kit containing hazardous material may cause eye and skin irritations. See MATERIALS SUPPLIED and labels for details.

7. Chemicals and prepared or used reagents have to be treated as hazardous waste according the national biohazard safety guidelines or regulations.

8. Avoid contact with Stop solution. It may cause skin irritations and burns.

9. Some reagents contain sodium azide (NaN₃) as preservatives. In case of contact with eyes or skin, flush immediately with water. NaN₃ may react with lead and copper plumbing to form explosive metal azides. When disposing reagents, flush with large volume of water to avoid azide build-up.

10. All reagents of this test kit containing human serum or plasma have been tested and were found negative for HIV I/II, HBsAg and HCV by FDA approved procedures. However, a presence of these or other infectious agents cannot be excluded absolutely and therefore reagents should be treated as potential biohazards in use and for disposal.
Storage and Stability

The kit is shipped at ambient temperature and should be stored at 2-8°C. Keep away from heat or direct sun light. The storage and stability of specimen and prepared reagents is stated in the corresponding chapters.

The strips of microtiter plate is stable up to the expiry date of the kit in the broken, but tightly closed bag when stored at 2–8°C.

Specimen Collection and Storage

Serum, Plasma (EDTA, Heparin)*

The usual precautions for venipuncture should be observed. It is important to preserve the chemical integrity of a blood specimen from the moment it is collected until it is assayed. Do not use grossly hemolytic, icteric or grossly lipemic specimens. Samples appearing turbid should be centrifuged before testing to remove any particulate material.

| Storage:  | 2-8°C | -20°C | Keep away from heat or direct sun light
| Stability: | 7 d    | 6 mon | Avoid repeated freeze-thaw cycles |
## Materials Supplied

<table>
<thead>
<tr>
<th>Quantity</th>
<th>Volume/Content</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1 x 12 x 8 | MTP | Microtiter Plate  
Break apart strips. Microtiter plate with 12 rows each of 8 wells precoated with adalimumab. |
| 1 x 0.25 mL | RCTV CNTR | Reactive Control  
Ready-to-use. Contains adalimumab-reactive antibody, human serum, stabilizers and <0.1% NaN3. |
| 1 x 0.5 mL | NEG CNTR | Negative Control  
Ready-to-use. Contains human serum, stabilizers and <0.1% NaN3. |
| 1 x 12 mL | ASSAY BUF | Assay Buffer  
Blue colored. Ready to use. Contains proteins, RF blockers and <0.1% NaN3. |
| 1 x 12 mL | POD CONJ | Peroxidase Conjugate  
| 1 x 12 mL | TMB SUBS | TMB Substrate Solution  
Ready to use. Contains TMB |
| 1 x 12 mL | TMB STOP | TMB Stop Solution  
Ready to use. 1N HCl. |
| 1 x 50 mL | WASHBUF CONC | Wash Buffer, Concentrate (20x)  
Contains Buffer with Tween 20. |
| 2 x 1 | ADH FILM | Adhesive Film  
For covering of Microtiter Plate during incubation. |
Materials Required but not Supplied

1. Micropipettes (< 3% CV) and tips to deliver 5-1000 µL.
2. Bidistilled or deionised water
3. Calibrated measures.
4. Absorbent paper and timer.
5. Standard laboratory glass or plastic vials, cups, etc.
6. Wash bottle, automated or semi-automated microtiter plate washing system
7. Microtiter plate reader capable of reading absorbance at 450 nm (reference wavelength 620-690 nm is optional).

Procedure Notes

1. Any improper handling of samples or modification of the test procedure may influence the results. The indicated pipetting volumes, incubation times, temperatures and pretreatment steps have to be performed strictly according to the instructions. Use calibrated pipettes and devices only.

2. Once the test has been started, all steps should be completed without interruption. Make sure that required reagents, materials and devices are prepared ready at the appropriate time. Allow all reagents and specimens to reach room temperature (18-25 °C) and gently swirl each vial of liquid reagent and sample before use. Mix reagents without foaming.

3. Avoid contamination of reagents, pipettes and wells/tubes. Use new disposable plastic pipette tips for each reagent, standard or specimen. Do not interchange caps. Always cap not used vials. Do not reuse wells/tubes or reagents.

4. Use a pipetting scheme to verify an appropriate plate layout.

5. Incubation time affects results. All wells should be handled in the same order and time sequences. It is recommended to use an 8-channel Micropipettor for pipetting of solutions in all wells.
6. Microplate washing is important. Improperly washed wells will give erroneous results. It is recommended to use a multichannel pipette or an automatic microplate washing system. Do not allow the wells to dry between incubations. Do not scratch coated wells during rinsing and aspiration. Rinse and fill all reagents with care. While rinsing, check that all wells are filled precisely with Wash Buffer, and that there are no residues in the wells.

7. Humidity affects the coated wells/tubes. Do not open the pouch until it reaches room temperature. Unused wells/tubes should be returned immediately to the resealed pouch including the desiccant.

<tbody>
<tr>
<td>1</td>
<td>Pipette 100µl of Assay Buffer non-exceptionally into each of the wells to be used.</td>
</tr>
</tbody>
</table>
| 2    | Pipette 10 µL of ready-to use Negative Control, Reactive Control, and Samples into the respective wells of microtiter plate.  
   Wells  
   A1: Negative Control  
   B1: Negative Control  
   C1: Reactive Control  
   D1 and on.: Sample (Serum/Plasma) |
| 3    | Cover the plate with adhesive film. Briefly mix contents by gently shaking the plate. Incubate 60 min at room temperature (18-25°C). |
| 4    | Remove adhesive film. Discard incubation solution. Wash plate 3 times each with 300 µL of diluted Wash Buffer. Remove excess solution by tapping the inverted plate on a paper towel. |
| 5    | Pipette 100 µL of ready-to use Peroxidase Conjugate into each well. |
| 6    | Cover the plate with adhesive film. Incubate 60 min at room temperature (18-25°C). |
| 7    | Remove adhesive film. Discard incubation solution. Wash plate 3 times each with 300 µL of diluted Wash Buffer. Remove excess solution by tapping the inverted plate on a paper towel. |
| 8    | Pipette 100 µL of TMB Substrate Solution into each well. |
| 9    | Incubate 20 min (without adhesive foil.) at room temperature (18-25°C) in the dark. |
| 10   | Stop the substrate reaction by adding 100 µL of Stop Solution into each well. Briefly mix contents by gently shaking the plate. Color changes from blue to yellow. |
| 11   | Measure optical density with a photometer at 450 nm within 30 min after pipetting of the Stop Solution. |
Interpretation Of Results

For the run to be valid, the OD450 nm of Positive Control should be ≥ 1.00 and the OD450 nm of each Negative Control should be <0.150, if not, improper technique or reagent deterioration may be suspected and the run should be repeated.

The results are evaluated by a cut-off value which is estimated by multiplying the mean OD450nm of the negative controls by 3.

I.e.;

If “Samle OD_{450}/the mean OD_{450} of Negative Controls” is ≥3, the sample is POSITIVE

If “Samle OD_{450}/the mean OD_{450} of Negative Controls” is <3, the sample is NEGATIVE
